FUXA Customization

The customization folder is located in **`FUXA/client/dist/assets/customization`**, in **`config.json`** you can configure the following attributes

```
{
    "appName": "MyAppName",
    "appTitle": "MyAppTitle",
    "favicon": "assets/customization/favicon.ico",
    "serverName": "MyServer",
    "appInfo": {
        "title": "Info Title",
        "image": "assets/customization/logo.svg",
        "subText": "powered by frangoteam"
    },
    "sideMenuTitle": "MyMenu",
    "logFileName": "fuxa-log",
    "reportHeaderText": "Report created from AppName",
    "splash": {
        "text": "MyApp is Loading...",
        "image": "assets/customization/logo.svg",
        "subText": "powered by frangoteam",
        "spinner": true,      // Introduced in v1.2.7
        "delay": 1000         // Introduced in v1.2.7
    }
}
```

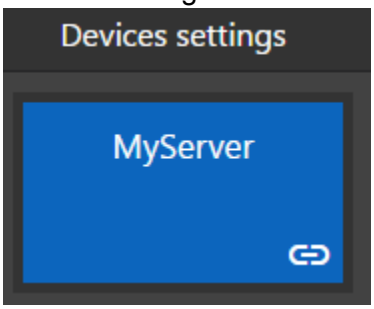

`"appName": "MyAppName"`	Browser console  Server console 

`"appTitle": "MyAppTitle"`
 	
`"favicon":`
`"assets/customization/myicon.ico"`
	Browser Tab icon and title

```
"serverName": "MyServer"
```

Devices settings

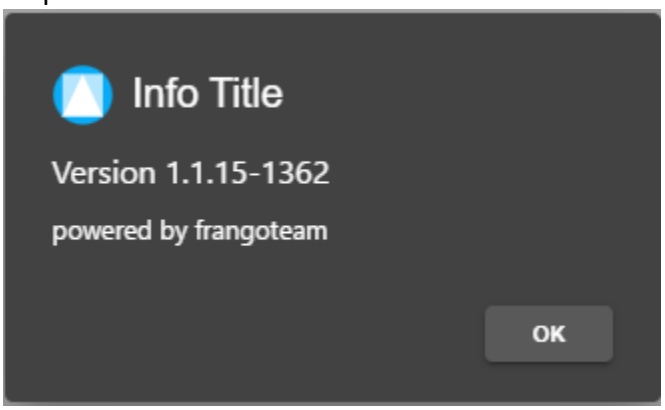

Server console

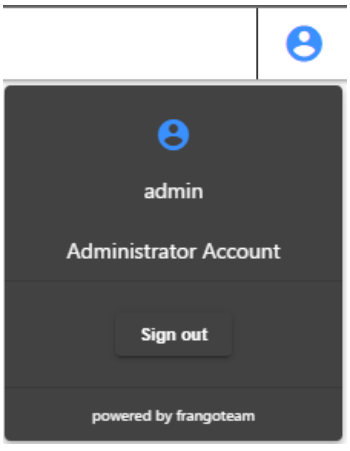

```
2023-11-19T12:41:07.309Z [INF]  MyAppName V.1.1.15-1362
2023-11-19T12:41:07.578Z [INF]  MyAppName init in 288 ms.
2023-11-19T12:41:07.589Z [INF]  'MyServer' created
2023-11-19T12:41:07.592Z [INF]  'MyServer' start
```

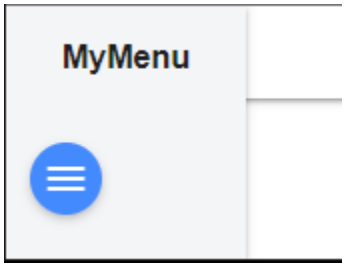

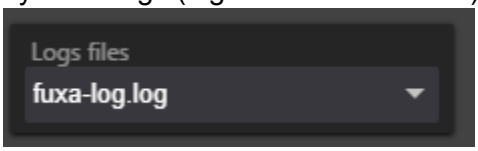

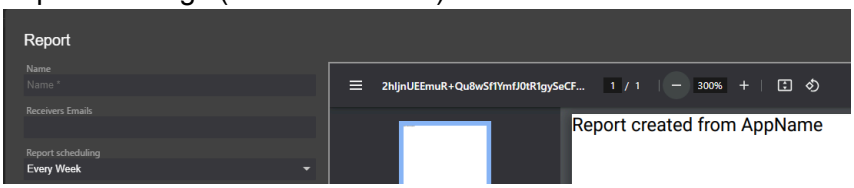

```
"appInfo": {
  "title": "Info Title",
  "image":
     "assets/customization/logo.svg",
  "subText": "powered by frangoteam"
}
```

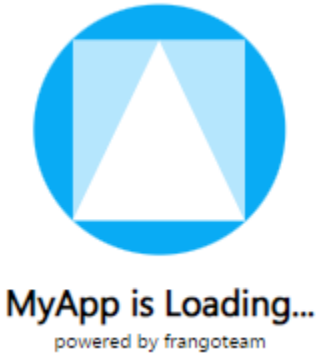

Help ⇒ About

User Info

`"sideMenuTitle": "MyMenu"`	Side Menu title 
`"logFileName": "fuxa-log"`	System Logs (log filename in Server) 
`"reportHeaderText":` `"Report created from AppName"`	Reports settings (little header text) 

`"splash": {`
`"text": "MyApp is Loading...",`
`"image":`
`"assets/customization/logo.svg",`
`"subText": "powered by frangoteam",`
`"spinner": false,`
`"delay": 3000`
`}`
	By Start:
	• the `spinner` (boolean) shows or hides a loading spinner
	• the `delay` attribute defines how long the splash is shown (in milliseconds, default 3000). If delay = 0, the splash is skipped completely.
	 

Caution: when you update the FUXA version, the folder **`customization`** and its contents are overwritten with the default, so it is a good practice to make a backup of the folder and after the update overwrite it with the backup.
